

5 Rib Panel

The 5-Rib is the “standard” metal roofing panel. Also known as Classic Rib, Tuff-Rib, or Ag Panel, it is a versatile product that can be used as siding or roofing. Loved by many due to its superior qualities that out perform asphalt roofing products by three times the life span. For contractors, it offers a time-saving efficient installation. For homeowners, it provides savings and the peace of mind that their roof is not going to blow off with the next storm that blows through.

5 Rib Panel

Features

Paint - 5-Rib panels are painted with Akzo Nobel Siliconized Polyester, CERAM-A-STAR 1050 paint. Akzo Nobel is a leader in the paint industry and has been a trusted company for many years. We offer 34 different colors and colored textures to choose from. Siliconized Polyester comes with a solid 40-year film warranty.

Anti-siphon Groove - 5-Rib panels are designed with an anti-siphon groove which is a bend in the underlap rib of the metal panel that prevents water from siphoning up and around the rib, preventing leakage.

Benefits

Longevity & Low Maintenance – The paint on our 5-Rib panels are warranted to be intact at the end of 40 years, plus the metal is protected by primer and a 25 1/2-year galvalume coating. There is virtually no maintenance necessary, no mold, no curling, and no tar streaks.

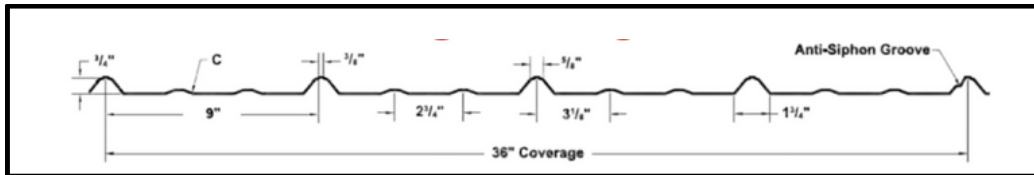

Environmentally Friendly/Energy Efficiency – Metal panels are made from 20 – 75% recyclable materials and may not need to be replaced for 40 to 60 years. While on the other hand, it is estimated that more than 20 billion pounds of asphalt shingles are dumped in landfills each year. Metal roofs are also easy to insulate to save energy in winter and they have reflective qualities to save energy in summer.

Strength - The 5-Rib panel roof has been tested to withstand 150-mile winds (the force of a small tornado).

Cost Savings – The greatest saving on a metal roof is over the span of a lifetime; it is very possible that a metal roof may not leak for 60-plus years. To date, we have not seen how long this new metal roofing product will last. There is also money to be saved on energy use, tax credits, and possibly insurance and installation as well.
